A relay is an electrically operated switch. Many relays use an electromagnet to mechanically operate a switch, but other operating principles are also used, such as solid-state relays. Signal relays are used for low level current switching. Some characteristics of signal relays are stable contact resistance, Form C contact arrangement, a fully sealed construction, compact size for optimal board space usage, and available latching and low operating power. Signal Relays usually refer to relays widely used in railway signal technique. Currently, there are many producing companies in the world Signal Relays (Up to 2 Amps) industry. The main market players are Omron, Panasonic, TE Connectivity, KEMET, Siemens, HONGFA and so on. The production of Signal Relays (Up to 2 Amps) is about 113654 K Units in 2015.
