The global Silicon Carbide (SiC) Power Semiconductors market was valued at 328.61 Million USD in 2021 and will grow with a CAGR of 11.05% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Silicon carbide, also known as carborundum, is a semiconductor containing silicon and carbon. It occurs in nature as the extremely rare mineral moissanite. The special characteristics of SiC power devices include high-temperature operation stability, high thermal conductivity, high-energy bandgap, and faster switching time. These characteristics of SiC power devices are encouraging original equipment manufacturers (OEMs) to adopt these devices over traditional Si power devices.
