The global Silicon Carbide Wafer market was valued at 25.56 Million USD in 2021 and will grow with a CAGR of 10.52% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

SiC single crystal wafers have excellent heat resistance and voltage resistance compared to silicon wafers that are widely used for semiconductors. SiC single crystal wafers can remarkably reduce energy loss during electric power control, significantly contributing to the reduction of energy use and environmental stress. They are highly expected as substrate materials for the next-generation power semiconductor devices. The global production of the silicon carbide wafer increased from 310 K Pcs in 2013 to 453 K Pcs in 2017, backed with the increasing demand of downstream industry. Key players in the industry include Cree, Dow Corning, SiCrystal and so on. USA, Europe and Japan are the major consumers. The total three regions accounted for more than 90% consumption market share in 2017. Among various applications, demand from powder device accounts for the largest share. In 2017, the filed consumed 39.34% silicon carbide wafer.
