### Abstracts

The global Silicon Photonic market was valued at 50.48 Million USD in 2021 and will grow with a CAGR of 23.08% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Silicon photonics is a novel technology that aims to develop silicon-based optical devices. Due to the availability of large established silicon fabrication units and the relatively low cost and high abundance of this material, there are high hopes in the semiconductor industry for this technology. APAC is expected to grow at the highest CAGR for the silicon photonics market during the forecast period. This is due to the increasing use of internet services in data center and telecommunications applications in this region. Also, major players have their manufacturing plants in APAC, fueling the growth of silicon photonics in APAC. The silicon photonics market in APAC is mainly driven by China as major players have their production facilities in the country. It is expected that there will be an increase in the use of silicon photonics transceivers for telecommunications application due the consistent rise in the use of smartphones and internet facilities in the country. Expos and conferences that showcase and promote emerging technologies would help in the growth of the silicon photonics market in the country.
