Silicone Structural Glazing is the use of a silicone sealant for the structural transfer of loads from the glass to its perimeter support system and retention of the glass in the opening. Insulating glass used in structural glazing must be silicone units. In 2017, the Asia Pacific region accounted for the largest share of the global silicone structural glazing market. As the market for silicone structural glazing in developed countries is maturing, markets in developing countries such as China and India are projected to grow at the highest rates from 2018 to 2023. The Asia Pacific market is projected to grow at the highest CAGR compared to those of other region-level markets, owing to increase in usage of silicone structural glazing in end-use sectors such as commercial, public, and residential buildings. China is projected to be the fastest-growing country-level market in the region for the silicone structural glazing market. The growth of the building and construction industry, coupled with the rising need for green buildings has resulted in the rise in demand for silicone structural glazing in the region.
