Abstracts

The global SIM Cards market was valued at 343.17 Million USD in 2021 and will grow with a CAGR of .58% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A subscriber identity module or subscriber identification module (SIM) is an integrated circuit that is intended to securely store the international mobile subscriber identity (IMSI) number and its related key, which are used to identify and authenticate subscribers on mobile telephony devices. It is also possible to store contact information on many SIM cards. A subscriber identification module (SIM) is an integrated circuit which is used to store the IMSI number. The SIM cards consist of memory capacities such as 32KB, 64KB, 128KB and 256KB. SIM cards are primarily used in GSM phones, CDMA phones, LTE handsets, and satellite phones. There is an interesting move toward wearable devices as companions to smartphones and other mobile devices, such as smartwatches, health bands, glasses and smart clothes, which present a growth area for smart-card suppliers and mobile network operators. The rising number of these devices in the market is an opportunity for operators and card suppliers to increase SIM penetration for both pluggable and embedded form factors. Companion devices can have an additional SIM card inserted (e.g., nano SIM) or an embedded SIM (i.e, eUICC). Wearable devices with SIM cards incorporated into them have the potential to increase mobile network operator (MNO) subscribers, leading to more

addressable devices for SIM management and increased revenue streams. The industry is expected to remain innovation-led, with frequent acquisitions and strategic alliances adopted as the key strategies by the players to increase their industry presence. Market stays in mature period with a clear concentration. There hardly to have obvious technology breakthrough except deeper system function integration. Meanwhile, optimize product mix and further develop value-added capabilities to maximize margins. Manufacturers can take advantage of this situation by reinforcing their production units and supply-chains to avoid any delay in production turn-around-times (TAT) and supply-lead-times.
