A single-board computer (SBC) is any complete computer that is built on a single circuit board and contains functional computer components including the microprocessor, input/output (I/O) and memory. SBC computers typically provide a fanless, low-power computing solution and a low profile architecture. The size of an SBC can vary from about the size of a credit card to that of a video game console. They are often incorporated into larger devices such as automatic teller machines, industrial and medical equipment, or robotic devices. Since the mid 2000s, inexpensive single board computers have been used by educators and hobbyists. Unlike a desktop personal computer, single board computers often did not rely on expansion slots for peripheral functions or expansion. Some single-board computers are made to plug into a backplane for system expansion. Single board computers have been built using a wide range of microprocessors. Simple designs, such as built by computer hobbyists, often use static RAM and low-cost 8 or 16 bit processors. Other types, such as blade servers, include all the memory and processor performance of a server computer in a compact space-saving format. APAC sales volume accounted for the largest market share of about 38% in 2019, followed by the North America and Europe. The manufactures of

Single Board Computer are concentrated in North America, Europe, Japan, China, Taiwan and so on. The global leading players in this market are Advantech, Abaco Systems, Curtiss-Wright, AAEON, ADLINK, Congatec AG, Kontron, Digi International, etc. The Single Board Computer are mainly used in many fields. In 2019, industrial automation application occupied about 35% sales market share in Single Board Computer market.
