The global Single-use Bioprocessing Systems market was valued at 2759.32 Million USD in 2021 and will grow with a CAGR of 10.47% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The single-use bioprocessing systems market is rapidly evolving. It focuses on developing disposable bioprocessing equipment and accessories for manufacturing of biopharmaceutical products. Bioprocess is a technique that produces biological materials such as a genetically engineered microbial strain for commercial use. For example, commercially useful chemicals are produced through bioprocess techniques such as microbial fermentation or degradation. The traditional approaches in bioprocessing involve stainless steel equipment that are not just difficult to maintain but also time-consuming and costly. During 2017, the mAB production segment dominated global single-use bioprocessing system market and is expected to continue its dominance over the next few years. The increased demand for mABs and their continuous assessment in new and expanded clinical indications, will be the major factors driving the growth of this market segment.
