## Abstracts

The global Single-Use Bioreactors market was valued at 15.95 Million USD in 2021 and will grow with a CAGR of 10.15% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A single-use bioreactor or disposable bioreactor is a bioreactor with a disposable bag instead of a culture vessel. Typically, this refers to a bioreactor in which the lining in contact with the cell culture will be plastic, and this lining is encased within a more permanent structure (typically, either a rocker or a cuboid or cylindrical steel support). Commercial single-use bioreactors have been available since the end of the 1990s and are now made by several well-known producers (See below). Improved return on investment for small companies and startups, reduced complexity in automation, requirement of low capital investments, and lower environmental impact of operations using SUBs are the major factors driving the growth of this market. However, extractability and leachability issues regarding disposable components like plastic bags used in bioreactors, high cost of disposables, and difficulties in meeting GMP standards are the major factors that are restraining the growth of the SUBs market. Based on technology, the market is divided into wave-induced motion SUBs, stirred SUBs and other technologies. Based on applications, the market is segmented into biopharmaceutical manufacturers and R&D departments. The Wave-induced Motion SUBs account for the largest market share (68.21%) in 2015. The R&D application

account for 63.87% of the Global Single-Use Bioreactors market in 2015. USA is expected to account for the largest share (29.18%) of the market in 2016. In this region, government's support for new biologics has encouraged a number of research and development activities in the biologics sector. The major players operating in the Global Single-Use Bioreactors market include Sartorius, GE Healthcare, Thermo Fisher, Pall(Danaher), Eppendorf, Merck Millipore, Applikon, PBS Biotech, Finesse, K?hner, Celltainer and Amprotein.
