Chronic sinusitis affects more than 31 million people in the United States. It is more prevalent than heart disease and asthma and has a greater impact on patients` quality of life than chronic back pain or congestive heart failure. The majority of patients with chronic sinusitis are treated with oral antibiotics and/or nasal steroids, which can increase the risk of antibiotic resistance and cause unwanted side effects such as epistaxis (nose bleeds), nasal ulcers, and nasal and oral infections. The most effective treatments are Functional Endoscopic Sinus Surgery (FESS) and balloon dilation at high pressures, which are known to cause significant patient discomfort and are conducted in a surgical suite under general anesthesia or IV sedation. The classification of Sinus Dilation Devices includes Balloon Sinus Dilation and No-Balloon Sinus Dilation. The proportion of Balloon Sinus Dilation in 2016 is about 97%, and the proportion is in decreasing trend from 2012 to 2016. Sinus Dilation Devices is widely used in Physician`s Office and Operating Room. The most proportion of Sinus Dilation Devices is Operating Room, and the proportion in 2016 is 51%. The trend of Operating Room is in decrease trend. North America is the largest supplier of Sinus Dilation Devices, with a production market share nearly 96% in 2016.
