Abstracts

The global Slitter market was valued at 490.85 Million USD in 2021 and will grow with a CAGR of 5.37% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact wwhich will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market verdors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The Slitter, commonly referred to as slitter reminder, is a primary machine used in the conversion of Paper, Film, and Foil material. Designed to convert a wide roll of material into several thinner rolls, the slitter starts by unwinding a master or mill roll, continues by slitting the unwound material into various widths, and finally completes the process by rewinding the slit material onto cores of various widths.First, for the analysis of industry structure, the slitter industry is centralized. From a regional perspective, Europe is the largest revenue area for paper cutters and a leader in the entire paper cutter industry. From a geographical perspective, China is the largest consumer market in the world. Second, for price trend analysis, a key variable in the performance of a cutter manufacturer is the cost of raw materials, especially the speed at which any growth can be passed to customers. The price of the main raw materials varies depending on the price of the steel. This year, with the global steel industry downturn, the price of cutting machines will continue to decline at least for the next five years. Third, given the current demand for cutting machines, we tend to think that this industry still has a bright future. In terms of product prices, as competition intensifies, the slow decline in recent years will continue in the next few years. Similarly, gross margins will fluctuate.
