Sludge treatment chemicals refer to chemicals that are used in various industries to treat sludge and to purify water before it can be released or reused for various purposes. Industrial sludge refers to a mixture (both solid and liquid) which is produced or generated during wastewater treatment. A sludge mainly contains water along with various chemicals, organic materials, pathogens, and other microorganisms. Industrial sludges comprise of pollutants that include heavy metals, organic pollutants, and pathogens; and compounds that are of agricultural value such as phosphorus, organic matter, calcium, potassium, nitrogen, sulfur, and magnesium. Currently, North America is the largest market for sludge treatment chemicals. The region has huge installed plant capacities of sludge treatment chemicals and is an export based sludge treatment chemicals market. The market is emerging in various countries such as China, Japan, India, Saudi Arabia, and Brazil due to increasing industrial activity. Also, large number of emerging manufacturers from Asia-Pacific and Eastern Europe are expected to reduce import dependence of various regions which is further expected to drive the market in future.
