Abstracts

The global Small Cells market was valued at 3275.08 Million USD in 2021 and will grow with a CAGR of 20.28% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Small cells are low-powered radio access nodes, and they operate in licensed bands. These are used in indoor and densely populated areas to provide better wireless network coverage. The coverage area of small cells varies from more than 32 feet to a few miles, which is comparatively less than that of mobile macrocells. The types of small cells that are commonly used by telecom operators globally include femtocells, picocells, microcells, and metrocells. Small cell base stations play an important role in expanding the capacity of wireless networks. During 2017, the 3G small cell segment dominated the small cell market and accounted for a major part of the overall market share. Such dominance in the market is due to the rapid growth in shipments and deployment of 3G small cells in the global market. The demand for 3G small cell is predominantly from developed regions such as the US, Japan, South Korea, China, and Western Europe.
