Abstracts

The global Small Satellite market was valued at 142.56 Million USD in 2021 and will grow with a CAGR of 21.85% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Small satellites are satellites of low mass and size, usually under 500 kg (1,100 lb). While all such satellites can be referred to as 'small', different classifications are used to categorize them based on mass. Satellites can be built small to reduce the large economic cost of launch vehicles and the costs associated with construction. Miniature satellites, especially in large numbers, may be more useful than fewer, larger ones for some purposes - for example, gathering of scientific data and radio relay. Technical challenges in the construction of small satellites may include the lack of sufficient power storage or of room for a propulsion system. North America led the small satellite market in 2017, owing to an increase in demand for small satellites from NASA and the Department of Defense (U.S.), and private sectors, such as research organizations and telecommunication. However, the market in the European region is expected to grow at the highest CAGR during the forecast period due to their high demand to use in battlefield missions, earth observation, and scientific exploration activities performed by various government and private organization.
