Smart gas meters work with an integrated smart energy monitor to provide operational flexibility and effectively track the consumption and associated costs. These meters can feasibly track and modulate the consumption of gas and calculate the overall consumption and supply costs to ensure cost benefits and curb energy waste. A smart gas meter not only measures gas flow but use wireless communication to connect to local or wide area networks allowing infrastructure maintenance, remote location monitoring and automatic billing. It also has leakage and shock detection systems that can greatly increase safety by detecting emergency situations and enabling the immediate and remote cutting of the gas flow in case of seismic activity or gas leakage.
