Abstracts

The global Smart Shade Devices market was valued at 17 Million USD in 2021 and will grow with a CAGR of 73.43% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Adoption of new technologies such as Bluetooth Smart and Bluetooth low energy (BLE), Wi-Fi, and other related wireless technologies helps to communicate with the motor mechanisms and regulate the movement of motorized shades. The Wi-Fi technology dominated the smart shade devices market and accounted for a major part of the overall market share. Wi-Fi technology dominates the market by a significant margin over other technologies. The primary reason for this dominance is the ease of accessibility and high range of compatibility. Owing to an already established presence of the Wi-Fi technology, majority of the vendors are manufacturing smart home devices including smart shades that are compatible with Wi-Fi. With the rapid increase in the adoption of Wi-Fi compatible smart shades, the global smart shade devices market by Wi-Fi wireless technology is likely to dominate the market during the forecast period.
