The intelligent sorting system is a modern device integrating light, machine, electricity, and information technology, with a wide range of technology extensions. The sorting system is generally ring-shaped. The linear motor drive assembly placed in the track is driven by a linear motor drive assembly without mechanical transmission friction. Drive to the preset sorting opening, and sort the parcels to the target intersection through the rotation of the sorting cart belt. Classical intelligent sorting solutions include flap type, bag drop type, slider type, narrow belt type, swing arm type, etc. The emerging intelligent sorting solutions mainly include cross belt type and AGV type. The automated sorting system is based on its layout and parameters. And other characteristics are applied in different scenarios. Among them, the circular cross-belt sorter has advantages in technical parameters and cost performance. At present, as the main solution for small express sorting, it is widely used in the express industry. A set of cross-belt sorting equipment includes feed parts Platforms, cross-belt trolleys, tracks, driving devices, information identification devices, information management systems, control systems and grids, excluding auxiliary conveyor belts and other equipment. The swing arm type is currently the main equipment used for automatic sorting of large

express express. Globally, the main manufacturers of Smart Sortation System include Daifuku, SSI SCHAEFER and KION Group (Dematic), etc. Among them, Daifuku and SSI SCHAEFER both have the largest market share of over 7.0 percent. Europe is the largest market, holds a share over 25%.
