### Abstracts

The global Sn-2 Palmitate market was valued at 890.41 Million USD in 2021 and will grow with a CAGR of 3.8% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography (North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

The palmitic acid in human milk is positioned in a very unique way to the second (middle) position of the glycerol backbone also known as sn-2 position (figure 2). In human milk, approximately 70-75% of the palmitic acids is esterified to the sn2 position of the triglyceride (sn2 palmitate). In contrast, vegetable oils only have about 8-10% of their palmitic acid attached to sn2. This special preferential positioning is even more significant knowing that it is conserved in all women, regardless of their ethnic origin or nutrition. That's Sn-2 Palmitate. The OPO industry is an oligopoly, that is, a market with a very limited number of producers, a result of the high market entry barriers of high capital costs and the time-consuming and expensive process of product specification for food usage. Advanced Lipids, Bunge Lodders Croklaan and Zhejiang Beijia are the three main players. China is the world's largest infant milk powder market, and LPI analysts believe that China is the substantial largest consumer market for OPO. Advanced Lipids said: Sales of InFat are spread among a number of different non Chinese manufacturers of infant formula that primarily produce products containing InFat for Chinese infant formula brands, as well as a number of different Chinese local manufacturers of infant formula. The infant nutrition products produced by such

manufacturers using InFat may be sold under the manufacturers` brand names, or may be manufactured by one or more manufacturers and then sold by third parties under the third parties` brand names.
