### Abstracts

The global Sodium Chlorite market was valued at 2.01 Million USD in 2021 and will grow with a CAGR of 2.1% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Sodium chlorite is a salt-based chemical that also features the element chlorine. It has several practical uses and is very similar to sodium chlorate, a common food additive. While not dangerous in small amounts, large doses of sodium chlorite can be dangerous. In consumption market, North America and China are the mainly consumption regions due to the bigger demand of downstream applications. In 2016, these two regions occupied 69.16% of the global consumption volume in total. Sodium chlorite has two types, which include liquid sodium chlorite and solid sodium chlorite. With bleaching effect in application process of sodium chlorite, the downstream application industries will need more sodium chlorite. So, sodium chlorite has a huge market potential in the future. In last two years, the production volume of Chinese manufacturers is limited by local environmental standard. Thus, the global production of sodium chlorite decreased. The major raw materials for sodium chlorite are sodium chlorate, hydrogen peroxide, sulfuric acid, sodium hydroxide, and other auxiliary chemicals. Fluctuations in the price of the upstream product will impact on the production cost of sodium chlorite. The production cost of sodium chlorite is also an important factor which could impact the price of sodium chlorite. The sodium chlorite

manufacturers are trying to reduce production cost by developing production method.
