Sodium Dithionite (also known as Sodium Hydrosulfite) is a product synthesized by sodium formate process using sodium formate and sulfur dioxide as raw material, which can be applied to textile printing and dyeing, bleaching of pulp and printing, food bleaching, pharmaceutical and chemical fields. At present, global economy is fluctuant, and most countries take measures to stimulate the economy, especially in Japan, Europe, Australia and the resources providing countries, like Russia, Middle East, Brazil etc. In many fields, China is the largest consumer, but in the past several years, China's economic growth slows. The China government is reforming the economic structure, to release energy of economy. USA economy is relatively stable with low-speed-growth, but in future, it also is full of risk. In Southeast Asia, the economy also is fluctuated the economic base is comparatively unsubstantial, due to the exchange fluctuations. In India, although many people look to further increase in India, but the economic aggregate is too low and the infrastructure is behindhand and inefficient. In a long term, India will keep a stable and low growth in economy, due to its economic structure and bureaucratic system. On the other hand, the political factors, like government succession, security fears, trade dispute, domestic employment, even the regional

military crisis, always affect the economic activity, country to country, corporation to country. So it needs us with deep insight, to analyze the prospect avoid risk, to grasp the opportunity and reduce losses.
