Abstracts

The global Sodium Lauroyl Isethionate market was valued at 70.43 Million USD in 2021 and will grow with a CAGR of 2.74% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Sodium lauroyl isethionate (SLI) is a mild surfactant used in various personal care applications. Sodium lauroyl isethionate exhibits excellent detergency properties. It is also used as a cleansing agent in several applications such as shampoos, facial care products, body washes, and toothpastes. However, it can be harmful to the skin and can cause irritation when used in higher concentrations or quantities above the standard limits. Sodium lauroyl isethionate is formulated by using fatty acids combined with isethionic acid. Isethionic acid is derived from sodium bisulfite and aqueous solution of ethylene oxide. However, ethylene oxide is a carcinogenic substance. This may act as a restraining factor for the market.
