The global Solar EVA market was valued at 2266.61 Million USD in 2021 and will grow with a CAGR of 8.17% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

EVA sheet is an indispensable key material in PV module because of its two major functions in the solar cell module: completely connecting glass, cells and back sheets and completely protecting cells from moisture and dust. For the global market, Japan and Korea still the large suppliers of Solar EVA. For the two markets, the main business is Solar EVA export, though the PV installation of the two countries increases gradually. China is the largest Solar EVA import market, and with the surging PV installation, the import will rise relatively. India and the South East Asia has expanded capacity and production of Solar EVA, the trend is due to the raising PV installation in the regions. The PV market in Asia has exhibited great hope for PV investors; as a result, we predict that Asia, especially China will be the largest market of Solar EVA industry.
