The global Solar Microinverter and Power Optimizer market was valued at 604.13 Million USD in 2021 and will grow with a CAGR of 10.26% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A Solar Microinverter and Power Optimizer are plug-and-play devices used in photovoltaics, that convert direct current (DC) generated by a single solar module to alternating current (AC). Solar Microinverters and Power Optimizers carry out the same task within a solar panel system as they convert direct current (DC) energy into the alternate current (AC) energy that can be used in home. Both of them can monitor the performance of individual solar panels, rather than the solar panel system as a whole. Microinverters and power optimizers improve performance for solar panels on complicated roofs, or roofs that experience marginal shading during the day.
