The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Solar PV Inverter is one power transfer apparatus, which is used to transfer the DC power generated through PV to AC power. For the reverse process of rectification, the apparatus is so called 'inverter'. When solar cells are disposed in sunlight, it produces direct current. However the supply system in the form of DC power has an extremely limited. For example, fluorescent lamps, televisions, refrigerators, electric fans and so on cannot be used directly with DC power supply, and most electric machinery are as well. In addition, when the power supply needs to increase voltage or lower voltage, it is simply adding a Transformer in AC power system, while lifting technology of voltage in a DC system is much more complex. Therefore, in addition to direct use of communications, weather and other special DC power users, the production of electricity need to be equipped with a Solar PV Inverter in PV systems.
