The global Solar Trackers market was valued at 201.07 Million USD in 2021 and will grow with a CAGR of 18.47% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Solar trackers are utilized to move photovoltaic panels toward the sun to utilize more sunlight. They enable solar modules to remain in the best position to accumulate maximum energy from the sun. The application of tracking technology allows solar panels to follow the movement of the sun and increase electricity production as compared to a stationary array. Solar trackers are attached to solar panels to adjust their positioning against the daily passage of the sun throughout the year as the weather and seasons change. The market size for solar tracker has been estimated on the basis of indicators in product segments. This report also discusses various applications and technology of solar trackers. The major applications considered under the solar tracker market cover the utility and non-utility. Whereas, key product segments analyzed in this report include single axis and dual axis solar trackers. The market is also analyzed based on technology including solar PV, CPV and CSP. Furthermore, the market is analyzed based on geography that constitutes countries such as UAE, South Africa and Saudi Arabia.
