The global Solder Ball market was valued at 21.03 Million USD in 2021 and will grow with a CAGR of 6.36% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

In integrated circuit packaging, a solder ball, also a solder bump (often referred to simply as 'ball' or 'bumps') is a ball of solder that provides the contact between the chip package and the printed circuit board, as well as between stacked packages in multichip modules. The Solder Ball can be placed manually or by automated equipment, and are held in place with a tacky flux. Solder Ball are very small spheres of high-purity solder for micro soldering system. The most important advantages of Solder Ball are their very clean surfaces and exact solder quantity control. Most suitable for Ball Grid Array, Multi-Chip Module, Chip On board Flip Chip and CSP. Asia Pacific held the leading share of the market in terms of revenue in 2016. We estimate that the global market share of Solder Ball is 27.66% in Taiwan, 20.54% in Korea, 17.28% in Japan, 15% in China and 10.56% in South East Asia. Because there are many larger IC packaging (including testing) companies in these region, such as ASE, Amkor, SPIL etc. Solder Ball are most suitable for Ball Grid Array, Multi-Chip Module, Chip On board Flip Chip and CSP. Senju Metal, DS HiMetal and MKE captured the top three revenue share spots in the Solder Ball market in 2016. Senju Metal dominated with 40.00% revenue share, followed by DS HiMetal with 19.14% revenue share and MKE with 7.08%

revenue share.
