Abstracts

The global Soldering Robot market was valued at 101.78 Million USD in 2021 and will grow with a CAGR of 5.32% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Soldering robot is a machine to finish Soldering. Soldering is a process in which two or more items (usually metal) are joined together by melting and putting a filler metal (solder) into the joint, the filler metal having a lower melting point than the adjoining metal. Soldering differs from welding in that soldering does not involve melting the work pieces. In brazing, the filler metal melts at a higher temperature, but the work piece metal does not melt. In the past, nearly all solders contained lead, but environmental and health concerns have increasingly dictated use of lead-free alloys for electronics and plumbing purposes. The classification of Soldering Robot includes 4-axis Robot, 3-axis Robot, etc. The production proportion of 4-axis Robot in 2017 was about 62%, and the proportion is in increasing trend from 2013 to 2017 as the technology is mature. Soldering Robot is widely used in Consumer Electronics, Appliances Electronics, Automotive Electronics, etc. The most proportion of Soldering Robot is Consumer Electronics and consumer electronic is also the largest driver factor of soldering robot.
