## Abstracts

The global Solderless Breadboards market was valued at 46.27 Million USD in 2021 and will grow with a CAGR of 4.64% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

This report studies the Solderless Breadboards market, a breadboard is a construction base for prototyping of electronics. Originally it was literally a bread board, a polished piece of wood used for slicing bread. In the 1970s the solderless breadboard (AKA plugboard, a terminal array board) became available and nowadays the term 'breadboard' is commonly used to refer to these. Because the solderless breadboard does not require soldering, it is reusable. This makes it easy to use for creating temporary prototypes and experimenting with circuit design. For this reason, solderless breadboards are also extremely popular with students and in technological education. Older breadboard types did not have this property. First, as for the global Solderless Breadboards industry, the industry concentration rate (Volume) is highly dispersed. The top 5 manufacturers have 49.84% market share in 2016. The 3M which has 16.38% market share in 2016, is the leader in the Solderless Breadboards industry. The manufacturers following 3M are B&K Precision and MikroElektronika, which respectively has 12.01% and 8.17% market share globally.
