Somatostatin analogues stop your body from making too many hormones. They can reduce the symptoms of carcinoid syndrome and may slow down tumour growth. Somatostatin is a protein made naturally in the body. It is made by: a gland in the brain (hypothalamus), the stomach, the pancreas and the bowel. Somatostatin can slow down hormone production, including many of the gut hormones, slows down the emptying of the stomach and bowel, controls the release of hormones made by the pancreas, including insulin and, slows down or stops the release of growth hormones. Rise in the research and development and launch of novel drug therapies are the factors driving the growth of somatostatin analogs over the forecast period.
