Sorting Machine is an advanced machine for sorting large amounts of items in relatively complex builds. The Sorting Machines industry can be broken down into several segments, Optical Sorting Machines, Gravity/Weight Sorting Machines, etc. They usually sort goods by colour, size, weight and other properties. Optical classification is an automated process that uses cameras and/or lasers to classify solid products. Depending on the type of sensor used and the software-driven intelligence of the image processing system, Optical Sorting Machine can recognize the color, size, shape, structural characteristics and chemical composition of objects. Gravity/Weight Sorting Machine is used to sort foods (such as fish, poultry, and meat) by weight. Others type include an electron beam scanning sorter and a slap waveform sorter. Asia-Pacific is the largest consumption region of Sorting Machines, with a consumption market share more than 50%. There are several key players in the global Sorting Machines market, like Tomra, Buhler, Satake, Hefei Meyer Optoelectronic Technology, Steinert, etc. Sorting Machines mainly have two types: Optical Sorting Machines and Gravity/Weight Sorting Machines, which are mainly used in food industry and recycling industry.
