Sound absorbing materials are used in almost areas of noise control engineering to reduce sound pressure levels. To use them effectively, it is necessary to: Identify the important physical attributes and parameters that cause a material to absorb sound. Provide a description of the acoustical performance of sound absorbers used to perform specific noise control functions? Develop experimental techniques to measure the acoustical parameters necessary to measure the acoustical parameters of sound absorbing materials and the acoustical performance of sound absorbers. Introduction of sound absorbing materials in noise control enclosures, covers and wrappings to reduce reverberant build up and hence increase insertion loss? Introduction of sound absorbing materials onto surfaces of rooms to control reflected sound. Global sound absorbing material consumption area is mainly concentrate in China, North America and Europe. In 2017, China consumed about 31.06% of global total sound absorbing material. It is a major export country. North America consumed about 1207.1 kilo ton sound absorbing material. Europe consumed 1432.7 kilo ton sound absorbing material, with a consumption share of 27.96%.
