Abstracts

The global Sound Level Meter market was valued at 74.02 Million USD in 2021 and will grow with a CAGR of 3.28% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A sound level meter is used for acoustic (sound that travels through air) measurements. It is commonly a hand-held instrument with a microphone. The diaphragm of the microphone responds to changes in air pressure caused by sound waves. That is why the instrument is sometimes referred to as a Sound Pressure Level (SPL) Meter. A microphone is distinguishable by the voltage value produced when a known, constant sound pressure is applied. This is known as the microphone sensitivity. The instrument needs to know the sensitivity of the particular microphone being used. Using this information, the instrument is able to accurately convert the electrical signal back to a sound pressure, and display the resulting sound pressure level (decibels dB SPL). The most recent standards for sound level meters are international standard BS EN 61672:2013 or IEC 61672:2013 and these have superseded most previous standards. This report mainly focuses on the sound level meters compliance with IEC 61672:2013, instead of simple sound level indicators usually less than \$600. Asia Pacific is expected to be the fastest growing market over the forecast period owing to extensive usage in the industrial and environment field. Globally, the Sound Level Meters industry market is low concentrated as the manufacturing technology of Sound Level Meters is relatively

immatures. And some enterprises, like Bruel & Kjaer, Cirrus Research, TSI-Quest, etc. are well-known for the wonderful performance of their Sound Level Meters. At the same time, China, occupied 29% sales market share in 2018, is remarkable in the global Sound Level Meters industry due to the lowest cost of raw material and labor. On the basis of type, the Sound Level Meters market has been segmented into Class 1 and Class 2. The Class 1 Type segment is estimated to register the highest CAGR, in terms of value, of the overall Sound Level Meters market.
