Soybean Polysaccharide is a water soluble polysaccharide extracted and refined from soybean. Soybean Polysaccharide are acidic polysaccharides, the structure similar to the fruit (Pectin, extracted from soybean is a refined water-soluble polysaccharides, with their high emulsifying dispersion stability and adhesive functions, are widely used in the food processing industry, while products in the pharmaceutical industry can also be widely used. As international economic situation is complicated, in the next few years there will be many uncertainties although. Due to the government` policy and the high sales of Soybean Polysaccharides in the international market, the current demand for Soybean Polysaccharides product is relatively high in the mature market, such as Japan and EU, but the demand in China is relatively higher due to the downstream demand. Although sales of Soybean Polysaccharides brought a lot of opportunities, the study group recommends the new entrants who just having money but without technical advantage and downstream support, do not to enter into the Soybean Polysaccharides field hastily.
