Carbon black (subtypes are acetylene black, channel black, furnace black, lamp black and thermal black) is a material produced by the incomplete combustion of heavy petroleum products such as FCC tar, coal tar, ethylene cracking tar, with the addition of a small amount of vegetable oil. Carbon black is a form of paracrystalline carbon that has a high surface-area-to-volume ratio, albeit lower than that of activated carbon. In consumption market, the growth rate of global consumption is smooth relatively with the 5.58% of average growth rate. China and Europe are still the mainly consumption regions. For the developing country, China to grow at a fast pace annually and may become the largest region in the future in terms of Carbon Black consumption.
