Sports medicine is a branch of medicine that deals with the prevention and treatment of injuries incurred during sports activities, exercises or physical fitness training. Sports medicine devices therefore, include a wide range of products utilized for the prevention, recovery and cure of injuries related to the above physical activities. These injuries consist of fractures, sprains, soft tissue damage, joint dislocation, strain and musculoskeletal injuries. Rise in technological advances and growing importance of sports activities among the young as well as the older population as well as focus on developing cost-conscious treatment methods currently form major drivers for the growth of this market. Demand for arthroscopic procedures is expected to grow in the near future owing to the increase in geriatric population and sports injuries across the globe. A rise in disposable incomes in developing countries has boosted the confidence of OEMs towards these regions. However, unfavorable reimbursement policies in developed countries are expected to have negative impact on the market growth across the globe.
