The global Spring Brake Chamber market was valued at 1317.37 Million USD in 2021 and will grow with a CAGR of 1.2% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A spring-brake chamber functions as a service-brake chamber, which is an emergency brake in case of air-pressure loss somewhere in the system, and as a reliable spring-applied parking brake. Spring brakes are installed in the same manner as service brakes and are always installed on the front tandem axle. Spring brakes are often installed on both rear axles in a tandem-axle unit. They are a reliable parking brake because they are held on by spring pressure and require no air.
