The global SSL Devices market was valued at 657.44 Million USD in 2021 and will grow with a CAGR of 3.45% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Solid-state lighting (SSL) refers to a type of lighting that uses semiconductor light-emitting diodes (LEDs), organic light-emitting diodes (OLED), or polymer light-emitting diodes (PLED) as sources of illumination rather than electrical filaments, plasma (used in arc lamps such as fluorescent lamps), or gas. Solid state lighting system application has replaced the conventional incandescent and fluorescent lamps for general lighting purposes. Solid state lighting has the potential to revolutionize the lighting market with the introduction of energy-efficient light sources. Conventional incandescent bulbs are expected to attain obsolescence with the arrival of high brightness LEDs. Solid state lighting technology demand is anticipated to increase at a fast pace with continuous improvements in light quality, efficacy, and operating life.
