The global Starch Derivatives market was valued at 503.36 Million USD in 2021 and will grow with a CAGR of 6.11% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Starch derivatives are formed through a chemical reaction of raw starch, which contains hydroxyl groups and various functional groups. The derivatives formed have distinguished characteristics such as gelatinization, fluid viscosity, fluid paste stability, chemical resistance, and other applications. The growing preference for ready-to-consume food and beverages across the world is influencing the demand for starch derivatives significantly. The rising popularity of non-carbonated and energy drinks is complimenting this demand, as these beverages utilize natural sweeteners, of which these derivatives are important components. Apart from this, starch derivatives also have significant application in textile weaving and finishing, and the production of biofuels and glue due to which their demand is increasing by leaps and bounds. Going forward, the market is likely to witness a remarkable inflow of capital, as starch derivative producers are increasing their focus on improving the quality of their products in order to gain a competitive edge. Additionally, the demand for starch derivatives is anticipated to register a steady rise in the coming years due to the rapid expansion of the food and beverages industry. The usage of these derivatives in cosmetics as emulsifiers, in medicines as binders, and in animal feed and fiber additives is also

projected to provide potential opportunities for market growth in the near future.
