Abstracts

The global Stationary Emission Control Catalyst market was valued at 55.22 Million USD in 2021 and will grow with a CAGR of .95% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Emission control catalysts are now used on all types of internal combustion engines, as well as in a number of stationary applications. Catalytic reactors for mobile applications, known as catalytic converters, utilize catalyst-coated monolithic substrates. Terms which are used to characterize the catalyst performance include conversion efficiency, light-off temperature, and space velocity. The importance of emission control catalysts has been increasing as environmental concerns and measures to fight pollution have become more important globally. Emission control catalysts are divided into two types according to the source of the emission: emission control catalysts for mobile sources (such as automobile catalysts) and for stationary sources. The largest part of the market is the mobile emission catalyst segment; the stationary emission catalyst market is smaller. Following the success in mobile engine applications, catalyst technologies were introduced for stationary applications, for the control of volatile organic compounds (VOC) and NO_x emissions. The list of catalyst applications covers such emission sources as chemical plants, painting and coating processes, ovens, printing, dry cleaning, power generation, and, last but not least, stationary engines. Examples of catalyst technologies for stationary engines include non-selective catalytic reduction

(NSCR) of NO_x from rich burn natural gas engines and selective catalytic reduction (SCR) of NO_x by ammonia from diesel engines. USA is the largest consumption country of Stationary Emission Control Catalyst products in the world in the past few years while the market share increased to about 20.53% in 2015 from 24.85% in 2011.
