Strapping machines are various types of equipment that perform the action of bundling together products or parts by way of a strap or several straps that fasten an item to a material handling product, usually a pallet. Strapping is performed for many applications, including the reinforcement of packaging, which is the primary method of fastening products to a pallet. Strapping is also used as a method of combining many small products into one large bundle for easier material handling purposes. The price of Strapping Machines is slightly decreased in nearly five years. For being accorded with the corresponding application area, the product price has a large differences. Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this areas, the future will still have more new investment enter the field. As large demand of Strapping Machines product, the domestic enterprises should hold the opportunity to improve their technology with domestic advantages, such as low raw material price.
