## Abstracts

The global Styrenic Block Copolymer (SBC) market was valued at 5717.62 Million USD in 2021 and will grow with a CAGR of 3.75% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Styrenic Block Copolymers (SBCs) are high-performance thermoplastic elastomers engineered to improve the performance capabilities of a broad range of end products and applications. SBC is primarily classified into three types, namely styrene-butadiene-styrene block copolymers (SBS), styrene-isoprene-styrene block copolymers (SIS) and styrene-ethylene-butylene-styrene block copolymers (SEBS). The rising consumption rates of SBC in the healthcare industry is estimated to be one of the major factors that will have a positive impact on the growth of the market. The characteristics such as biodegradability, low drug absorption, high resilience, toughness, optical clarity, and process stability drives the demand for SBCs in the healthcare sector. These copolymers are increasingly used as substitutes of PVC in many tubing applications. Innovations and advancements in the medical sector and the increasing need for enhanced bio-degradable thermoplastic elastomers to manufacture medical bags, medical tubing, and syringes are driving the adoption of SBC in the medical sector.
