A submersible pump is an equipment whose assembly are kept submerged in the fluids that it needs to pump thus preventing the formation of any vapor cavity in the liquid and work by pushing fluids to the surface from their submerged positions. These pumps are developed for different flow rates of the liquid satisfying different purposes in industries. Global demand for submersible pumps is increasing due to infrastructural development activities worldwide. Governments of developing countries such as China and India are focussing on urbanisation, industrialisation and agricultural development, which is expected to drive demand for submersible pumps in the region. Demand for submersible pumps is expected to remain significant from agriculture and wastewater treatment industries throughout the forecast period. Development of new sources of potable water, small and medium scale industrial development are further expected to push the demand for submersible pumps over the forecast period 2017-2027. Presence of a large number of Chinese players offering low price submersible pumps present significant challenges for many regional and global players in the submersible pumps market. The submersible pump industry is relatively fragmented with the presence of a large number of manufacturers across the globe. Organised market players are found to

have been advancing towards mergers and acquisitions in order to expand their global footprint in the global submersible pumps market.
