Super alloy that exhibit excellent mechanical strength and creep resistance at high temperatures, good surface stability, and corrosion and oxidation resistance. They typically have an austenitic face-Center, June 2015ed cubic crystal structure with a base alloying element of nickel, cobalt, or nickel-iron. The development of superalloy has primarily been driven by the aerospace and power industries. As a kind of advanced material, the production of superalloy highly relies on the downstream demand.

Aerospace is the biggest market of superalloy, which takes more than 58.24% of total superalloy production in last year. IGT (electricity) and IGT (mechanical) are also major application of superalloy.
