Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Super alloy that exhibit excellent mechanical strength and creep resistance at high temperatures, good surface stability, and corrosion and oxidation resistance. They typically have an austenitic face-Center, and cubic crystal structure with a base alloying element of nickel, cobalt, or nickel-iron. The development of Superalloy has primarily been driven by the aerospace and power industries. The corrosion-resistant Superalloy is widely used in extreme environments where tremendous heat and corrosion resistance is paramount to the integrity of the end product. Chemical and petrochemical processing, power plants, and oil and gas industries widely use this superalloy. Many of the industrial nickel-based superalloy contains alloying elements, including chromium (Cr), aluminum (Al), titanium (Ti), molybdenum (Mo), tungsten (W), niobium (Nb), tantalum (Ta) and cobalt (Co). The superalloy market is concentrated. The numbers of major manufacturer in this field would be no more than 50. Regionally, USA is the biggest consumption region of superalloy, about 34.36% of the global superalloy consumption, and the market share of EU is also considerable. Consumption in China is more separated, but in fast development. a kind of advanced material, the production of superalloy highly relies on the downstream demand. Aerospace is the biggest market of

superalloy, which takes more than 56.36% of total superalloy production in last year. IGT (electricity) and IGT (mechanical) are also major application of superalloy.
