Aluminum hydroxide is also called trihydrate aluminum oxide. The ultra-fine aluminum hydroxide is widely used as an environmentally friendly halogen-free flame retardant for synthetic materials. It can be used in conjunction with various organic flame retardants to produce synergistic effects and improve Flame retardant properties and physical mechanical strength of the material.Europe and North America are the main production areas for ultra-fine aluminum hydroxide. The output in 2019 accounted for about 29% of the total global output, followed by China. The output market share of the Chinese market in 2019 accounted for about 28%, despite the existence of the Chinese market There is huge room for growth, but the quality and technology should be further improved. Leading companies in the ultrafine aluminum hydroxide industry include Huber, Nabaltec, China Supermarket, China Aluminum, and Zhongshun New Materials. The top five companies in 2019 accounted for about 27% of the market share, and their industry concentration is relatively high. In 2019, flame retardant fillers and smoke inhibitors accounted for about 87% of the global market share of ultrafine aluminum hydroxide. There are three types of ultrafine aluminum hydroxide, less than 1 micron, 1-1.5 micron and 1.5-3 micron. It can be used in flame retardant fillers and smoke

suppressants, fillers, catalyst carriers and other applications.
