The global Surgical Microscope market was valued at 48.06 Million USD in 2021 and will grow with a CAGR of 8.66% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Surgical microscope is a device that enables optimal surgical outcomes through high quality optical images. It also offers freedom of movement to the surgeon, while performing critical medical surgeries. It is an optical medical device that is specifically designed for used for 3D visualization of an undergoing surgery. It is a part of surgical setting and enables patients, staff and students to have the same view as the surgeon. The growth in global ageing population, greater adoption of minimally invasive surgeries, increase in R&D activity in life science vertical sector, and growth in health care infrastructure are some of the major factors that contribute to the increased demand for global surgical microscopes market. However, high cost of equipment in developing region would hamper the growth of the market. Asia-Pacific and LAMEA are the potential target areas for investment by key players in the operating market. Asia-Pacific is anticipated to be the fastest growing market due to increase in population, expansion of healthcare infrastructure and favorable scenarios for medical reimbursement programs in developing countries, such as India and ASEAN. In addition, North America is dominant segment accounting for one-third share in 2015, followed by Europe, which are expected to expand significantly, owing to the increase in

geriatric population, technology advancements, and growth in developments in life science vertical. On country level, China dominates the Asia-Pacific surgical microscopes industry, and is expected to maintain its dominance throughout the forecast period. This is attributed to increase in public healthcare expenditure and changes in demographics in the country.
