The global Swimming Pool Chemical market was valued at 102.21 Million USD in 2021 and will grow with a CAGR of 1% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

A pool's filter system does the work to keeping the water clean, but it takes chemistry to do the fine-tuning. It's important to carefully manipulate the chemical balance in pools for several reasons. One reason is that pathogens, such as bacteria, thrive in water. A pool filled with untreated water would be a perfect place for disease-carrying microorganisms to move from one person to another. Also, water with the wrong chemical balance can damage the various parts of the pool. In addition, improperly balanced water can irritate the skin and eyes. Improperly balanced water can also get very cloudy. Swimming pool treatment chemicals is necessary. In this report, we mainly research beaching powder, sodium hypochlorite, liquid chlorine and trichloroisocyanuric acid (TCCA) etc. Swimming pool treatment chemicals have many different types, such as beaching powder, sodium hypochlorite, liquid chlorine, trichloroisocyanuric acid and other specialty product etc. Those materials are mainly used to ensure the health and safety of swimming pool. During them, sodium hypochlorite is the most widely used material, with a consumption amount of 313.5 K MT in 2017. Trichloroisocyanuric acid is the second largest consumption material. Swimming pool treatment chemicals are used in residential pool and commercial pool. In United States, there are 10.4 million

residential and 309000 public swimming pools according to Association of Pool & Spa Professionals. So, Swimming Pool Treatment Chemicals are generally used in residential pool in USA. According to our research, in 2017, amount of swimming pool treatment chemicals used in residential pool is about 573.7 K MT, took a consumption share of 79.01%. Swimming pool treatment chemicals are consumed all over the world. During all regions, North America, which is the largest consumption region, consumed 435.8 K MT in 2017. Followed by Europe, consumed 135.2 K MT in 2017. Global regional consumption amount is related to swimming pool amount.
