Switch Dimmers are devices connected to a light fixture and used to lower the brightness of light. By changing the voltage waveform applied to the lamp, it is possible to lower the intensity of the light output. Although variable-voltage devices are used for various purposes, the term dimmer is generally reserved for those intended to control light output from resistive incandescent, halogen, and (more recently) compact fluorescent lights (CFLs) and light-emitting diodes (LEDs). The Europe is the largest market of Switch Dimmer, which occupies 26.1% of global market in 2017. It is followed by North America, which have around 24.91% of the global total industry. Other main regions which take important part in this industry include China and some Industrial countries. Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this areas, the future will still have more new investment enter the field. As large demand of Switch Dimmer product, the domestic enterprises should hold the opportunity to improve their technology with domestic advantages, such as low raw material price.
