Syngas chemicals are primarily produced from synthesis gas, a gaseous mixture of hydrogen and carbon monoxide. The prime compound obtained from catalytic reaction of syngas is methanol. Methanol is further utilized to produce other Industryly important chemicals such as formaldehyde, and acetyls.Coal gasification as feedstock is being widely used to increase petrochemicals production in general and specifically syngas. Petrochemical companies in China developed coal-based liquid fuels as a raw material to reduce its dependency on imported oil. The Chinese government is also encouraging petrochemical companies to use coal as feedstock to reduce oil and gas imports. Chinese and Indian companies should adopt coal gasification technologies to reduce dependence on imported oil and gas.
