### Abstracts

The global Synthetic Paper market was valued at 284.28 Million USD in 2021 and will grow with a CAGR of 2.83% from 2021 to 2027, based on HNY Research newly published report.

The prime objective of this report is to provide the insights on the post COVID-19 impact which will help market players in this field evaluate their business approaches. Also, this report covers market segmentation by major market vendors, types, applications/end users and geography(North America, East Asia, Europe, South Asia, Southeast Asia, Middle East, Africa, Oceania, South America).

Synthetic paper, from its early development and historical evolution, has typically been manufactured using synthetic resin derived from petroleum as its primary material. Naturally, this has given it characteristics similar to those of plastic film, but its appearance is remarkably similar to that of regular paper made from wood pulp. In addition, many synthetic papers have properties similar to those of regular paper. Major synthetic paper products include BOPP (Biaxially Oriented Polypropylene) and HDPE (High Density Polyethylene). BOPP synthetic paper market share worth 145.7 million USD in 2015, is expected to record a CAGR of 6.6% over 2016-2021. The growth can be attributed to superior BOPP features easing lamination, coating, and printing work. Furthermore, it is cost effective and possesses superior strength as well as exceptional moisture retaining characteristics. It is also used as packaging material for fruits, snacks, confectionary, fast food, and vegetables. HDPE synthetic paper market price worth 73 million USD in 2015 is projected to grow at a rate of 5.6% over 2016-2021.
